

Press Release & Update, July 2023

PEKTOS BEET FIBER BF 5

Early in 2022, we decided to expand our successful portfolio of functional food fibers with our widely used fiber from sugar beet, PEKTOS BEET FIBER BF 5.

Drawing on a team with decades of experience in producing fibers and hydrocolloids and in particular by the CEO Ulrich Zuber and his comprehensive technical and commercial knowledge from the production and marketing of VIDOFIBRES BF 5 - sugar beet fibers as well as using the same raw material, the startup was successful so that the required quality and various particle size grades were available shortly after the commissioning of our newly installed production line.

The quality of PEKTOS BEET FIBER BF 5 was quickly accepted by all traditional and long-standing sugar beet fiber users, so the first deliveries were made before the end of the year.

Since then, everything has been going as planned. Production and delivery have settled at the targeted 80 - 100 t per month in all qualities, super fine, fine, coarse, unground and flakes.

Planning is underway for the upcoming new sugar beet harvest campaign with sufficient raw material procurement and the required quality to meet the increasing market demand.

We are proud to take over the legacy of **Fibrex** and **VIDOFIBRES BF** by producing and offering **PEKTOS BEET FIBER BF**, our highly successful functional fiber from sugar beets, worldwide.

Our food fibers represent a significant product group in the company's strategic orientation.

Our current food fiber portfolio:

- PEKTOS BEET FIBER BF-5 in various particle sizes and shapes
- PEKTOS CITRUS FIBER CF 1525 in fine and super-fine grades
- PEKTOS CARROT FIBER KF 15
- PEKTOS APPLE FIBER AF 3
